ZHIXING / KNOWLEDGE IN MOTION

SCIENTIFIC COMMUNICATION + EDUCATION

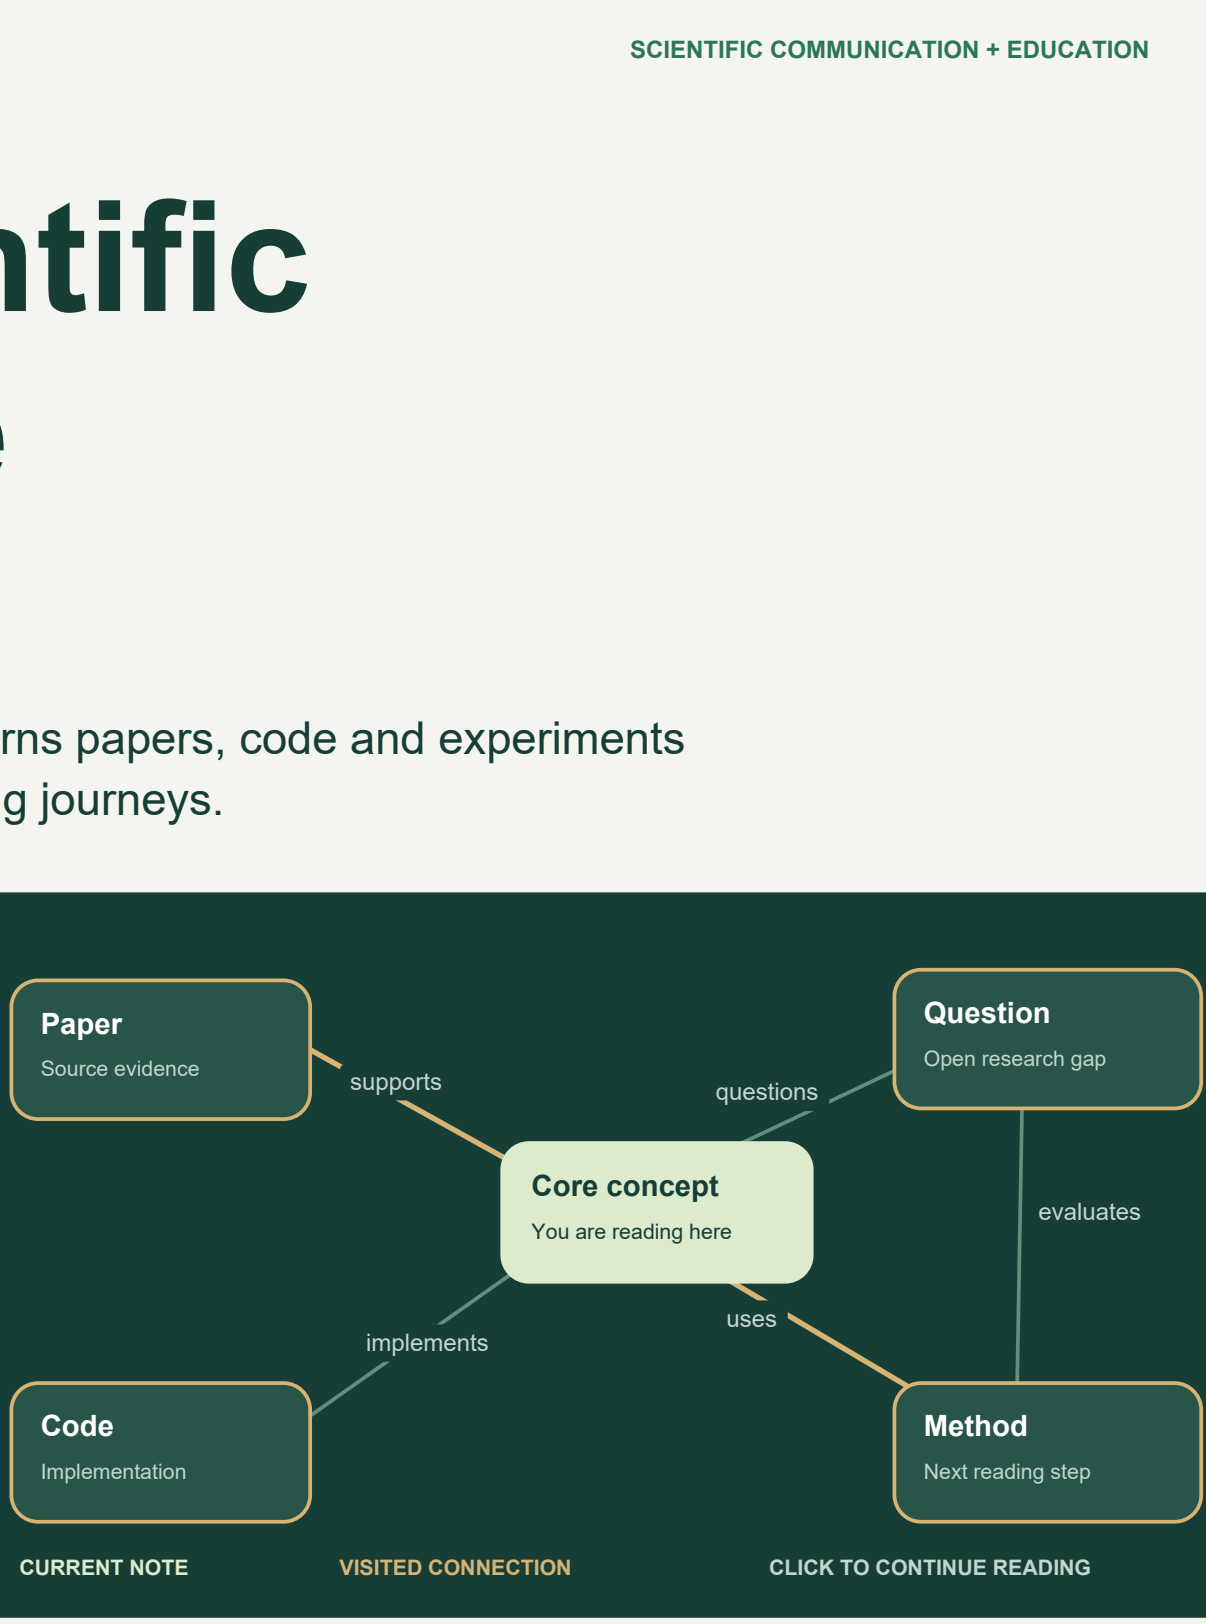

Make scientific knowledge navigable.

A relationship-driven workspace that turns papers, code and experiments into explorable, evidence-linked learning journeys.

FROM INFORMATION TO UNDERSTANDING

Read the evidence. Follow the connections. Explain the science.

Your reading position and visited path stay visible as you explore.

ONE FRAMEWORK. MANY DISCIPLINES.

Existing embodied-AI pilot: 60 notes / 91 relations / 1 canvas

01 / WHY IT MATTERS

Motivation

Scientific knowledge spans papers, code, datasets and experiments. Understanding depends on seeing how they connect.

Make those connections explorable so researchers can explain evidence and educators can guide discovery.

02 / THE DESIGN QUESTION

Problem definition

Folders and linear notes hide prerequisites, evidence and methodological links. Readers lose context between resources.

How can a knowledge workspace make scientific reasoning visible while preserving a learner's place?

03 / BUILD, DEMONSTRATE, EVALUATE

Hackathon target

Build on the working prototype to demonstrate a guided, evidence-linked learning journey and test its value for scientific explanation and cross-domain teaching.

TRACE

Follow a claim back to its source.

EXPLORE

Navigate concepts, methods and evidence.

EXPLAIN

Create a learning path for another audience.

Pilot evaluation: source traceability, explanation clarity and navigation.
